

SAHYAK

GLOBAL PRICING STRUCTURE

Developer-ready country-specific pricing for 15 priority real-estate markets

Pricing status: Proposed SAHYAK country pricing. These figures are not competitor price claims. The structure and strategy follow the existing SAHYAK India pricing architecture.

1. Universal Pricing Strategy

Formula: Monthly Price = Base Access + User Capacity + Lead Capacity + Storage Capacity + Integration Capacity.

SAHYAK does not use Basic / Pro / Enterprise feature-locking. Core CRM capabilities remain available; customers pay for the scale of their business.

Rule	Implementation
Base Access	1 organization, 1 user, 2,000 stored leads, 5 GB storage, core CRM.
Projects / Inventory	Unlimited. No per-project billing.
WhatsApp	Included. SAHYAK charges no per-message fee.
Bulk Messaging	Included. Rate limiting and anti-abuse are system controls, not billing limits.
CSV / Migration	Included. No separate migration fee.
Integrations	Distinct third-party platform capacity; campaigns/accounts within one platform remain one platform.
Annual Billing	10% discount on committed baseline capacity.
AI	Not part of current finalized pricing; future AI may be usage-based.
External API Costs	Meta / WhatsApp / BSP/provider charges remain separate from SAHYAK subscription pricing.

2. Capacity Behaviour

Lead overrun: warn before exceeding capacity; do not silently partially import; existing data is never deleted. New integration leads may be queued after the defined grace period.

Storage: warn at 90%; at 100%, block new uploads while existing files remain accessible. User and integration capacity require upgrade when full.

Annual upgrades: additional capacity activates immediately and is prorated for the remaining annual period.

3. Country Pricing

Each country uses its local currency. India retains the existing finalized India structure exactly.

4. Developer Implementation Specification

The pricing configuration must be country-aware and server-side authoritative. Do not derive non-India prices by converting the India plan at runtime.

Area	Required behaviour
Country selection	Organization has a country/currency pricing context.
Price authority	Backend configuration is the single source of truth for prices, tiers and entitlements.
Formula	Base + User + Lead + Storage + Integration.
Tier selection	Charge the selected highest tier for each capacity module; do not stack tiers inside a module.
Features	Do not create Basic/Pro/Enterprise feature locks from this pricing model.
Taxes	GST/VAT/sales-tax handling is separate from these base prices and belongs to the billing/tax layer.
Annual	10% discount on committed baseline capacity; upgrades prorated.
Over-capacity	Warn/block/queue according to the existing capacity rules; never delete existing customer data.
WhatsApp	No SAHYAK per-message charge; external Meta/BSP costs remain separate.
AI	Keep outside the finalized pricing until a separate AI usage model is approved.

5. Final Positioning

Pay for the scale of your business — not for locked features.

This document is the commercial specification for the next global pricing implementation phase. It preserves the existing India strategy while localizing the price points for the 15 selected markets.
